

Many Exaktime products have the ability to automatically adjust their time along with the Daylight Saving Time (DST) changes that occur twice a year. They do this based on a setting within TimeSummit

Products That Support Automatic DST Adjustment:

- Hornet
- JobClock/EX
- FastTrakker/Pro
- Exaktime Mobile for Android
- Exaktime Mobile for iOS
- Exaktime Mobile for BlackBerry

TimeSummit Professional & TimeSummit Enterprise:

The first time you open TimeSummit after updating to a version that supports the automatic Daylight Saving Time adjustment, you will be prompted to state if you do or do not follow the Daylight Saving Time changes. This setting will be stored permanently. If you need to adjust it or want to confirm how it is set, follow the below steps:

1. From TimeSummit open the TimeSummit Utilities.
 - A. Go to **Tools** at the top left of TimeSummit
 - B. Select **TimeSummit Utilities**
2. Select the **Advanced** link from the options on the left.
3. The option “Automatically Adjust for Daylight Saving Time” will be checked if it is enabled, or unchecked if disabled. To change the setting either check or uncheck the box and click **Save**, then close the Utilities screen.
